The non-invasive Ultherapy® procedure is U.S. FDA-cleared to lift skin on the neck, on the eyebrow and under the chin as well as to improve lines and wrinkles on the décolletage. The most common side effects reported in clinical trials were redness, swelling, pain and transient nerve effects. Reported adverse events from post-marketing surveillance are available in the Instructions for Use (IFU). Please see the IFU for product and safety information, including a full list of these events at [Ultherapy.com/IFU](http://Ultherapy.com/IFU).

# REAL RESULTS WITH NO DOWNTIME.

## The Ultherapy® Difference

Ultherapy lifts and tightens skin on the neck, chin, and brow, and improves lines and wrinkles on the décolletage.<sup>1</sup> It stimulates production of your skin's own collagen and elastin.<sup>2,3</sup> And unlike other, more invasive treatments, you get real results with no downtime.

## Completely Customized

Ultherapy uses ultrasound energy—high-frequency sound waves—to trigger a regenerative response that stimulates growth of new collagen and elastin.<sup>2,3</sup>

This ultrasound technology also allows your provider to see beneath the skin's surface, map each patient's facial structure and pinpoint the areas that will respond best to treatment.<sup>1</sup>

While Ultherapy doesn't duplicate the results of a surgical facelift, it's a great alternative for patients not ready for surgery or for those who want to continue building collagen after a surgical lift.

Initial results can be visible immediately after treatment, but the real results appear over two to three months as new collagen builds, gradually lifting, tightening and improving treated areas.<sup>3-8</sup>

Get a sneak peek at your lift with the ULTHERAPY RESULTS SIMULATOR\* at [yourultherapy.com](http://yourultherapy.com)

\*SIMULATOR RESULTS ARE ONLY AN APPROXIMATION OF POST-PROCEDURAL RESULTS AND WILL POTENTIALLY DIFFER FROM THE RESULTS OF AN ACTUAL ULTHERAPY TREATMENT.
